

touch plus+
feedback report

Animal: "Nick", 11 year old Border Collie DOG
Owner: LC, Avon
Problem: Post Stroke paralysis, low heart rate, kidneys malfunctioning, very sad dog who lay around; basic loss of will to carry on; lost his eye-sight

"After the stroke, my dog was dying slowly. He'd lost the will to live and was just giving up.

Karen offered to try a treatment as a last resort. The results after his first treatment were amazing. She started work on a sad, lifeless dog who wasn't interested in anything; she handed me back a perky, waggy dog who jumped up at me and then was happy to run around and have a little game.

He'd lost his sight in one eye and hadn't closed that eye as the eyelid didn't work. During his session as I watched, his eye started to close and open with the other one and slowly over the next few days his sight came back in that eye.

During sessions, the dog snoozed, became very relaxed and seemed to really enjoy it. After sessions, his heart rate picked up, he became quite lively and pleased to be around again. Amazing results!!

I believe the Touch Plus+ gave my dog an extra 2 months of quality life. Sadly we lost him due to probably a tumour of the brain, but his last 2 months were good and he spent his time playing and chasing foxes! Would I recommend Touch Plus+? Without a doubt.

What happened during those treatments I can't say and even Karen was amazed by the change in my dog. All I can say is Karen is a very special person with a wonderful gift who gave my beautiful dog an extra couple of months of quality life. Thank you so much."
