	My harse Jummer Suffered terroby with 'itchy less', identified
	TO THE COURT OF TH
	condition may be genetic, so I may possibly never quite
	eliminate the condition. (We had another Shine X hoise
	affected), Poulous C.
	The to our oranner has improved beyond becognition
	Excellent advice given personally over the phone. Prompt delivery of
	Your Name J. Howarit Postal Town Oh DHYM Signature Que Howar Date (8/1)
1	Finally, would you consider allowing us to use your feedback/photos for our website and/or within some PR? We fully understand if you'd rather not and/or rather leave it for a little while longerbut we hope you won't mind us asking all the same. If it's OK to use it please advise whether to use your full name & town, or just initials & town (or any other variant!). *(This forgi is for internal purpose only; permission is always sought before any comments are quoted.)

[Office Comment: Due to the severity of Drummer's issues & the time he'd struggled with it, his new sensitivity to 'dust' clearly demonstrated to us that his **immune system response** was 'confused' – we see many cases where knock-on issues start to appear...seemingly unconnected but in our opinion & experience, they are **totally connected** to struggling immune systems.

Therefore, we advised Mrs Howarth to use <u>Starter Pack 2-H</u> – which is **Ruggle-it** for the outsides & with **Protexin probiotics** for his insides, to help his body 're-boot' itself by helping his body generate more 'friendly bacteria'.

Staph A is a vicious issue that behaves like a "knife-wielding thug, trying to intimidate all treatments that are trying to chase it". As it's a cousin of MRSA, in our experience there is no easy way to deal with it (chemical or natural) & no one product that will help a body 'heal itself'.

In many cases the "thug" makes the issue **worse** once application starts in its attempt to get us off its back.

In our experience & by using the **Ruggle-it <u>plus</u> Protexin**, we find that most bodies CAN chase the "thug" out of their systems by very slowly forcing it to the edge of its cliffwhere once the "thug" has jumped off that cliff, the body can then move forwards as the body/immune system is able to 'manage' the issue itself.

Again and in our experience, what one sees on the surface <u>is a fraction</u> of where the "thug" is actually resident under the skin.....

Staph A is a very serious issue; we are very happy to work alongside any Vets as this 'infection' is sadly becoming increasingly common.

Always consult your Vet.

Many thanks to Mrs Howarth (and Drummer) for taking the time to write this feedback.

Note: Whilst we are hugely grateful for all the telephone feedbacks we receive on our products, only ones received in writing will be considered for inclusion on this web or as part of any PR...so that readers have peace of mind that we're not making this up! All quoted testimonials can be viewed at our offices.
