

touch plus+
feedback report

Horse: Basil, Bay Gelding, 23 years old
Owner: JH, Bristol, Avon
[JH owns Doobie too - please see separate Testimonial "Bolting, Biting Kicking..."],
Problem: Cushings Syndrome

*There has been an improvement with Basil as well; the combination of the food and the TouchPlus+ approach has definitely helped. I now have a **23 year old** horse teaching himself Parelli!
I put Doobie on the 'podium at liberty' and then played a few more games with him, heard heavy footsteps, turned around and to my amazement saw BAZIL stood on the podium. WOW!
Bazil does take an interest when I am playing with Doobie, something he never did before your TouchPlus+ sessions; he seems more alert and definitely has found his 'OLD' character. JH, Bristol, 2007.*
